

Data Analytics Staffing

Analytics Support to Supplement Your Team

It's easy to get bogged down in the continuous stream of report requests coming through the door, and your team might struggle to efficiently meet the data demands of your end users. Through Tegria's extensive, trusted network of data analysts, your need for skilled analytics staffing services can be met whatever the augmentation requirement.

Our team has a comprehensive Epic reporting background to deliver on your development and support needs, whether that's maintenance or enhancement requests, requirements gathering, or new report development. Our Data Engineering experts take it one step further, assisting with advanced data visualization, Caboodle extensions and external data integration, and ETL development.

Improve Request Turnaround Time

Identify Operational Workflow Issues

Reduce ETL Time

Mini Case Study: Reducing Reporting Backlog

Tegria analytics analysts joined a client who was struggling with their ticket volume. Our team completed a backlog of 22 report requests in 63% of the time estimated by our client, enabling our team to complete an additional 38 report requests in the remaining contract time. To make a lasting impact, our analysts mentored the client's team on how to choose appropriate reporting tools and advised their leadership team on effective Data Analytics project management tools and processes.

What We Do

- Data modeling and mapping
- Third-party data visualization development
- Report maintenance and enhancements, upgrade support
- ETL development and support
- Caboodle extension and external data integration
- New report development (SQL queries, Crystal Reports, Epic reporting)
