

MEDITECH Expanse Success Plan

A key factor to a successful MEDITECH Expanse implementation is pre-project planning. Tegria's proprietary Expanse Success Plan (ESP) prepares you well in advance to ensure executive endorsement, clear project goals, and accurate costing. With ample preparation, you'll benefit by having more time to focus on workflow improvements, thereby reducing project risks.

Preparing for Expanse

Tegria helps you identify and prioritize specific opportunities to address during the approval, budgeting, and preplanning phases of your Expanse migration. We will work with you to:

- **Develop the Budget** including a total cost of ownership model
- **Develop the Project Scope** to gain understanding of the requirements
- **Develop a Governance Model** that integrates with your decision-making structure
- **Identify Challenges** to be expected with an EHR implementation
- **Assess Organizational Bandwidth** for a project of this magnitude
- **Anticipate Gaps** which may impact timely completion
- **Prepare Executive and Board Level Presentation Materials** to gain implementation project approval

ESP Methodology

Tegria's team of MEDITECH Expanse-experienced resources utilize the ESP methodology to provide a comprehensive strategic plan for the implementation of MEDITECH Expanse. The ESP assessment spans six weeks and is designed to provide you with a full understanding of the costs and effort associated with successfully implementing MEDITECH Expanse, including major decision points, guidance and perspective. The assessment delivers high value to your hospital to reduce the risks associated with a major system change.

Fact Sheet

Week 1: Project Initiation & Document Review

Week 2: Data Gathering & Interviews

Week 3: Documentation & Analysis

Week 4: Confirm Findings

Week 5: Final Analysis & Plan Development

Week 6: Presentation of Deliverables
